Damp Report

GUIDANCE NOTES FOR CONVENTIONALLY BUILT CARAVANS

Readings between 0 -15% - no cause for concern.
 Readings between 15 - 20% - require further investigation, but compare them with the caravan average reading.
 Readings greater than 20% - will identify areas needing remedial work.
 It may be worth considering a recheck after three months.
 This may be early signs of water ingress or evidence of moisture and further action will be required.
 When readings go above 30% then structural damage may be occurring and deterioration is inevitable.

GUIDANCE NOTES FOR ALU-TECH CONSTRUCTION CARAVANS

Readings are taken on the floor only - readings below 20% are considered acceptable.
 Readings greater than 20% will identify areas needing further investigation and possibly remedial work.

PLEASE NOTE

The figures above are given for your guidance only.
 If we believe there is cause for concern, we will ensure you are aware of that when we discuss the damp readings with you and will advise you accordingly.
 We would emphasise that this report accurately reflects the condition of your caravan at the date stated.
 These readings may be subject to atmospheric conditions, and the company cannot accept any liability for water ingress, which may become apparent at a future date.
